The image shows a Visual Studio Code editor window with three tabs: 'Welcome', 'employee_salary.py', and 'Test1.py'. The 'Test1.py' tab is active, displaying a Python script. The script defines a function `add_stock(stock)` that appends `stock` to a `portfolio` list and returns `stock`. Below the code editor is a terminal window with tabs for 'PROBLEMS', 'OUTPUT', 'DEBUG CONSOLE', 'TERMINAL', and 'PORTS'. The 'TERMINAL' tab is selected, showing the execution of the script. The terminal output includes prompts for user input, the addition of 'AAPL' and 'TSLA' to the portfolio, and a menu for further actions. The menu options are: 1. Add Stock, 2. Remove Stock, 3. Find Stock, 4. Reverse Portfolio, 5. Show Portfolio, 6. Compare Stock Symbol Lengths, and 7. Exit. The user has entered '1' twice, and the program has added 'AAPL' and 'TSLA' to the portfolio. The terminal ends with a prompt 'Enter your choice: '.
